

Cédrik Letarte

Software
engineering intern

Contact details

 450-801-3708

 cedrikletarte@gmail.com

Skills

 Mobile application development
(Android & iOS)

 Web application development
(React, Next.js, and ASP.NET)

 Software programming (C#, Java,
and Python)

 Game development (using the
Unity game engine)

 Server configuration and
administration (Windows & Linux)

 Database management (SQL,
MySQL, NoSQL, JSON, and XML)

 System interface usage (Bash and
PowerShell)

Education

- **Bachelor's Degree in Software Engineering** since 2023
École de technologie supérieure, Montréal, QC
- **Computer Science Technician Diploma** 2023
Cégep de Valleyfield, Salaberry-de-Valleyfield, QC

Professional Experiences

- **Specialized IT Technician** 05/2022 - 09/2023,
01/2024 - 04/2024
Suroît Regional Hospital, Salaberry-de-Valleyfield
 - Monitor the granting of access to software and files for users through the use of Active Directory.
 - Ensure the configuration and setup of workstations for users, thereby guaranteeing an optimal work environment.
 - Plan and execute the replacement of outdated computer equipment, ensuring an up-to-date and efficient infrastructure.
 - Proactively and reactively resolve various issues related to computer hardware and software, implementing effective solutions.
 - Install LTE modules for laptops requiring wireless connectivity outside of the healthcare network.

Other Work Experience

- **Dairy Products Clerk** 05/2019 - 05/2022
IGA, Saint-Lazare
 - Restock shelves by adding missing items in an orderly and aesthetically pleasing manner.
 - Provide clear and accurate responses to customers regarding products, offering high-quality customer service.
 - Ensure the receipt and thorough verification of orders, ensuring compliance and integrity.

Softwares

- SSMS
- BaseX
- Eclipse
- Visual Studio
- Visual Studio Code
- IntelliJ
- Pycharm
- Oracle
- Oracle Apex
- VirtualBox
- Wireshark
- Android Studio
- Xcode
- MagicDraw
- Docker Desktop
- Power BI
- Unity
- Octopus
- SCCM
- Dameware
- DirectorX
- Citrix

Languages

French
English (functional)

Projects

● Portfolio

Design of a web page in React aimed at creating a space that highlights my knowledge and skills in IT. It is a portfolio detailing my academic background, areas of interest, technologies I work with, as well as my completed personal projects. You can visit it by clicking on the following link: www.cedrikletarte.com.

● Multifunctional Server

I set up a complete infrastructure on an Ubuntu server, integrating modern technologies to meet various needs while ensuring security, performance, and reliability. This project demonstrates my mastery of essential software engineering tools and my ability to solve complex problems independently.

Here are the main technologies and methods I used, each playing a crucial role in setting up this system:

- Domain name with Cloudflare protection
- Reverse proxy with SSL/TLS certificate
- Robust firewall
- Docker containers
- VPN

● Sandbox video game

My team and I developed a video game combining construction and first-person immersion. The central concept allows players to design their own city using an intuitive interface for selecting and manipulating 3D objects. Once the city is built, players can explore their creation in first-person view, with the ability to perform stunts to enhance their experience.

We integrated existing 3D models and programmed the game mechanics in C#, showcasing our expertise in programming and collaborative project management.
